

SAN PITCH RIVER DISTRIBUTION SYSTEM

1954 ASSESSMENT

\$2,100.00

FORWARD:

The yearly assessment of this River System has been based upon the Annual Report of water used as submitted to the State Engineer by the River Commissioner, using only the one year record of delivery.

The State Engineer now has official records of the water delivered to each user for the years 1951 - 1952 - and 1953, and therefore, the 1954 assessment is based upon a 3-year average of acre-feet of water as to the pro-rated assessment for each listed water user and next year (1955) the assessment will be based upon a 4-year average until 1956, when a 5-year average acre-foot delivery will be used from there on.

It is felt by the undersigned that this basis is in agreement with the Supreme Court of Utah.

BASIS OF ASSESSMENT

The 3-year average acre-feet of water reported as being delivered to all the listed water users within this system is 26,205.67 acre-feet, and

\$2,100.00 divided by 26,205.71 acre feet equals

\$0.0801353295 Cost per one acre-foot of water

as the pro-rated share of each water user.
